

THE SCHROTH PATIENT MULTIPOINT HARNESS SYSTEMS

Built for the mission: reliable when it matters most.

SCHROTH Stretcher / Medivac patient restraint systems are designed to keep the patient secured to a stretcher in the event of an accident. The harness belts feature a wide range of adjustment options and fulfill industry requirements such as EN 1789.

SCHROTH PATIENT MULTIPOINT HARNESS SYSTEM

The SCHROTH patient restraint systems have been specifically developed to meet the requirements for stretcher systems as defined by the EN 1789 standard. SCHROTH offers customized solutions for the military and aerospace sectors based on a range of different requirements and attachments to the stretcher.

KEY BENEFITS

- Comfortable and easy to use
- Designed for military or commercial applications
- Color coded pull and release tabs
- Wide range of standard COTS configurations
- Can be adapted or modified to meet customer specifications
- Installation and removal without additional tools.

MAIN PRODUCT FEATURES

NATO Stretcher belt NSN: 6530-12-389-4123

- No hardware or modification to stretcher needed for installation
- SCHROTH RFR Buckle

- Separate upper leg fixing and foot loop

NATO Stretcher belt NSN: 6530-12-425-8085

- No hardware or modification to stretcher needed for installation
- SCHROTH RFR Buckle with dual action safety lock buckle
- Multi point color coded harness system

OPTIONAL PRODUCT FEATURES

- Color markings on the shoulder and lap belts
- Modification/Customization of attachment via end fittings possible
